

GEOSPATIAL RESEARCH RADAR

Morning brief | 2026-09-04

Priority = 58% interest fit + 42% MVP/Jupyter prototypeability

#1 PRIORITY 69 | MVP 77 | 2026-02-03 | WATCH: Qiusheng Wu

GeoAI: A Python package for integrating artificial intelligence with geospatial data analysis and visualization

Qiusheng Wu | Journal of Open Source Software | Illustrative web finding

MVP: Make a low-compute surrogate: reuse published embeddings/features or a tiny sample rather than training a large model.

#2 PRIORITY 60 | MVP 44 | 2026-08-21 | WATCH: Andrew J Tatem

Advances in small area population estimation in the absence of national census data

Andrew J Tatem, Gianluca Boo, Heather R Chamberlain, Christopher C Nnanatu | PNAS | Illustrative web finding

MVP: Recreate a small-area estimator with WorldPop/GHSL/census-style open data for one county or district.

#3 PRIORITY 56 | MVP 35 | 2026-02-23

A foundation-model GeoAI framework for continuous heat and health risk mapping

Daniel P. Johnson | Frontiers in Environmental Science | Illustrative web finding

MVP: Test the method on an open or synthetic disease-count grid; compare baseline and spatially aware results.

#4 PRIORITY 44 | MVP 30 | 2026-04-03

Using genomic epidemiology and geographic activity spaces to investigate tuberculosis outbreaks in Botswana

Chelsea R Baker, Ivan Barilar, Leonardo S de Araujo, Daniel M Parker et al. | International Journal of Health

MVP: Recreate a small-area estimator with WorldPop/GHSL/census-style open data for one county or district.

#5 PRIORITY 23 | MVP 21 | 2026-07-05

Towards GeoAI Foundation Models: A Multimodal Learning Framework with Geospatial Intelligence

Meiliu Wu, Qunying Huang, Anahid Basiri, Yunus Serhat Bicakci et al. | Frontiers in Artificial Intelligence and

MVP: Make a low-compute surrogate: reuse published embeddings/features or a tiny sample rather than training a large model.
